

## Why Evolution is Impossible

All life contains DNA, so for evolution to be true the DNA molecule must first evolve. The first problem is that the **rate of destruction** of even relatively simple chemical compounds, such as amino acids, **by ultraviolet light or electrical discharges far exceeds their rate of formation**. Thus, no significant quantities would be produced.

Another insurmountable barrier is that these amino acids would have to be **arranged in an exact sequence** to form a protein...like the letters in a sentence. Mere laws of probability forbid this from happening.

**THE PROBABILITY OF A PROTEIN OF ONLY 50 AMINO ACIDS FORMING BY CHANCE WOULD BE 1/10<sup>65</sup>, OR IN LAYMAN LANGUAGE —**

**100,000,000,000,000,000,  
000,000,000,000,000,000,000,000,000,000,000,000,000,000,000,  
000,000 TO *one***

Even the simplest cell contains **several thousand different kinds** of proteins, and **many billions of each kind**, plus all kinds of DNA, RNA, and other highly complex molecules, along with many complex structures, **arranged in an incredibly complex system.**

**HIGHLY ORGANIZED STRUCTURE  
OF A MOLECULE OF DNA**

In order to believe in evolution, you **have to believe** this happened, even though it is **statistically impossible**. It is much easier to believe that a higher intelligence, God, supernaturally created this complex universe. (*Have You Been Brainwashed?* by Dr. Duane Gish)
