Wedding Cake Cutting Guide

This guide shows how to cut wedding tiers into pieces approximately 1”x 2” by two layers high (about 4”). Even if a larger serving size is desired, the order of cutting is still the same.

The first step in cutting is to remove the top tier, and then begin the cutting with the second tier followed by the third, fourth and so on. The top tier is usually saved for the first anniversary, so it is not calculated into the serving amount.

### Round

Move in two inches from the tier’s outer edge; cut a circle and then slice 1” pieces within the circle. Now move in another 2”, cut another circle, slice 1” pieces and so on until the tier is completely cut.

### Square

Move in 2” from the outer edge and cut across. Then slice 1” pieces of cake. Now move in another 2” and slice again until the entire tier is cut.

### Hexagon

Move in 2” from the outer edge and cut across. Then slice 1” pieces of cake. Now move in another 2” and slice again until the entire tier is cut.

The number of servings listed are intended as a guide only and offer a small portion of wedding cake. If portions larger than 1”x 2” are served, then you will have less servings than the chart indicates.
