

First United Pentecostal Church Pana, IL

Omega provided consulting, architectural design and construction management services that resulted in development of this 21,000 s.f. new church facility. A feature of the Omega system is that it allows the church to take full advantage of any savings that might be realized by volunteered labor or donated materials.

The First UPC of Pana took full advantage of our construction management system. Many members of the church had professional experience in the construction trades and were willing to utilize their talents and sacrifice their time for the benefit of the church. A skilled church member was also hired by Omega to provide daily site supervision under Omega oversight.

The church features a sanctuary seating 500 surrounded by offices and classrooms, nursery, restrooms, and evangelist quarters. The upper floor contains the sound room, music director's office, and classrooms. The church is an economical combination of load-bearing split-faced block walls and wood stud walls, with a wood truss roof system and shingles. The exterior features factory-dyed split-faced block and exterior insulation finish system.
