

New Covenant Believers' Church Columbus, OH

The story behind the design and construction of New Covenant Believer's Church is a confirmation to us that the Omega system works.

The congregation had paid a local architect to design a pre-engineered steel building. After completion of the design, the church put the plan out for bids with local general contractors only to find that the bids were considerably over the church's budget. The Pastor then happened to meet us when he visited Christ Church Apostolic while it was under construction. After the Pastor explained their situation to us, we knew that we could help this church so we arranged to meet with its board.

We presented the Omega design/build system with its safeguards to ensure that the design fits the church budget, along with the benefits of construction management. The church leadership agreed to scrap their original plans even though they had paid tens of thousands of dollars to the architect. The church then began working through the Omega system of consulting, design and construction.

The 15,500 s.f. church that Omega ultimately designed and built better met their needs, both now and in the future, and came in about \$300,000 under their original steel building cost while giving the church a larger, more aesthetically pleasing building.
