

CoreTech Update

Laempe Reich

NUMBER	• 111810 ML
DATE	• 22 NOV 10
SUBJECT	• LUBRICATION
SERIAL NUMBERS	• ALL

The purpose of this bulletin is to inform owners of Laempe CoreCenters or CoreShooters, the recommended grease-lubrication types. Earlier Laempe machines specified lubricant similar to hydraulic oil. That is acceptable for machines [Series LKFZ | LL | L] using **urethane** bushings for tables and side clamps. That remains acceptable. For all metallic bushing models, LB, LFB models we have always recommended **NLGI 000 or 00 fluidized grease** be used for all machine lubrication. Newer machines and replacement guides in most cases now have either **bronze or iron bushings** and *hydraulic oil does not provide sufficient lubrication.*

Our spec suggestion is **Fuchs Renolit H EP SF**. This grease is compatible *with guides that have a urethane OR metal bushing* and works in our standard hand pump oil guns. **(Order Part No 45122)** The Fuchs brand lubricant is what the automatic lubrication units are typically filled with from our factory with each new Laempe machine.

Not sure what type guides you have? Call us. If there are any questions regarding this notification or if we can be of any assistance please contact our office at 205 655 2121. Or email us at Max@LaempeNA.com
