May is the final Newsletter of the year which means it's also my final letter as president. I will not miss composing a letter each month as this is the part of the job I dread. I was apprehensive about undertaking the duties of president this year, but being surrounded by a hard working Board and committee chairpersons made doing my job easier. Trae Milam, Alan Schlichtemier, and I are at the end of our three year sentence, I mean term, of serving on the board. The three new board members for next year that were elected at the April general meeting are Roger Berg, Ben Robinson, and Tim Marshall. I have been impressed with all who have served on the Board during my three years, but especially so with the youngest Board members: Matthew Chumley, Jared Dysart, and Trae Milam. They are hard working and smart and I feel the SGS is in good hands for years to come. A special thanks also to Joe Lott. Joe served as Treasurer this year and converted our bookkeeping to QuickBooks. This should make it easier for future treasurers. Last but not least, I would like to thank Demetra Morgan for her service. She ensures continuity from one Board to the next and provides advice and counsel when needed. I could not have done the job without her help.

Morris Nichols did a great job this year as program chairman. When the scheduled April speaker, Brian Lock, had to cancel at late notice due to unavoidable circumstances, Morris quickly found a replacement in Jeff Prilliman with Baker Hughes. Jeff gave a very informative talk titled “High-Resolution LWD Images Used to Optimize Completions in Unconventional Play — North America”.

A Message from the President

Dan Scurlock
Build reservoir analyses. Watch your potential soar.

IHS PETRA® provides a unique solution to integration, analysis and manipulation of geological, geophysical, petrophysical and engineering information. With easy data loading and a powerful and flexible database, you can both effectively manage projects and quickly visualize results using interactive mapping, cross sections, log plots, cross plots and more—all within a single system. Superior technical support and proven integration of customer enhancements make PETRA the highest-ranked1 geological interpretation tool in the E&P industry for both reliability and accuracy and ease of use. Energy information, refined.

Thanks Jeff for coming to speak on such short notice. Andy Taurins is scheduled to present the May program titled “East Texas Woodbine Formation — How horizontal well technology has impacted development in the play” on May 15, 2012. Please send your reservations to Morris at mnichols@stroudexploration.com or fax 318-425-2211.

Bill Meaney has scheduled a continuing education program for May 7, 2012. Dr. John M. Holbrook from Texas Christian University will present a one-day program on “Fluvial Stratigraphy”. The program will be held at the Petroleum Club on the 15th floor. Attendance will be limited to the first 75 paid registrations. At the time of this writing, the registration is still open.

I would like to thank Kevin and Rachel Hill for all their hard work on the website and Newsletter this year. If you have information about our profession or science of which you would like to relay or inform the membership, a letter to the editor would be a good way to contact other members. If you have any news or announcements for society members that need to be put on the website or newsletter, contact Kevin or Rachel Hill. Visit the SGS website at www.SGS1.org.

Just a reminder that other SGS events in the first part of May include the Spring Fling on May 5 at East Ridge Country Club from 6 to 9, and SGS Hit and Run (5K run and tennis tournament) on May 11, 2012 at Pierremont Oaks Tennis Club. Contact Trae Milam for questions about the Spring Fling. Contact Cody Lenert or Anthony Spano regarding the Hit and Run.

-Dan Scurlock

With reservoirs becoming increasingly complex, you need the most accurate information you can get to better understand your reservoir.

Weatherford Labs helps you get more from your core by combining an unsurpassed global team of geoscientists, engineers, technicians and researchers with the industry’s most comprehensive, integrated laboratory services worldwide. From core analysis, sorption, geochemistry and isotopic composition to detailed basin modeling and comprehensive data packages, we provide you with real reservoir rock and fluid information that hasn’t been distilled by a simulator or iterated by software.

We call it “The Ground Truth” - giving you the accurate answers you need for better reservoir understanding. You’ll call it a better return on your reservoir investment. To learn more, contact TheGroundTruth@weatherfordlabs.com.
Andy Taurins
Presents
“The Eagle Ford Shale: Outcrop Studies Related to the Oil and Gas Potential of a Major Unconventional Reservoir.”

11:30 a.m. Tuesday, May 15
The Shreveport Petroleum Club, 15th floor
Cost: $15, Children 10 and under $8

We encourage members to invite guests, spouses, and friends to any of our meetings.

If you'd like a seat, kindly email or fax your reservation by Friday, May 11 to:

Mr. Taurins is Co-Principal of Lantana Oil & Gas Partners, a leading energy divestment and advisory firm in Houston, Texas. Founded in 2004 with partner David Nini, Lantana has sold over $1 Billion in assets throughout 28 states in the U.S. Currently, Mr. Taurins is overseeing more than $1.5 Billion in asset divests this year alone.

Prior to founding Lantana Oil & Gas Partners in 2003, Andy worked with Waterous & Co. leading over $270 million in asset and corporate sales for a variety of companies from small privately-owned companies to large publicly traded companies with a geographical focus in the Gulf Coast, Permian Basin, San Juan Basin, and the Mid-Continent area. Mr. Taurins began his career at Coffman Exploration and was responsible for acquisition evaluations. After moving to Houston in 1993, Mr. Taurins spent several years performing reserves evaluation work for Tenneco Energy. He then joined Agip Petroleum where he gained expertise in reservoir engineering through the management of Agip's Gulf of Mexico assets and complete preparation of annual reserve reports.

Andy received a B.S. in Petroleum Engineering from the University of Texas at Austin in 1990 and is a member of the Society of Petroleum Engineers, Houston Producers Forum, and ADAM-Houston (Acquisitions, Divestitures, and Mergers).

Abstract

“East Texas Woodbine Formation — How horizontal well technology has impacted development in the play”

The Woodbine play in Madison, Leon, and Brazos Counties, has traditionally been developed with vertical wells. Improvements in horizontal well drilling and completion techniques have led to a renaissance for the Woodbine formation in East Texas, leading to producers drilling horizontal wells between previously depleted vertical wells. Vertical wells in the area traditionally had an initial average production rate of 35 BOPD and an ultimate recovery of 75,000 Bbls, new horizontal wells have an initial production of up to 1,400 BOPD and EUR's in excess of 500,000 Bbls. The horizontal Woodbine is now one of the most sought-after assets in the country.

This presentation will detail the history of the play and discuss the current activity as well as some of the results of recent wells in the area.

because he'd rather not become a fossil.
This one day program will offer techniques for improved subsurface mapping and more accurate prediction of lithology and porosity distribution within fluvial reservoirs as depicted in seismic, wellbores, and outcrop data sets.

Instructor
Dr. John M. Holbrook,
Texas Christian University

Dr. Holbrook conducts fundamental research and provides private consulting within the fields of sedimentary geology and stratigraphy. His specialization is sequence stratigraphy and fluvial stratigraphy.

Registration fee of $90.00 includes continental breakfast, lunch, and handouts.

Attendance will be limited to the first 75 paid registrations.
